Rona® Cosmetic Pigments and Fillers

Microna® Matte Colors

Microna® Matte Colors have high color strengths and purity. These pigments are based on mica. The Microna® Matte pigments were obtained by fixing the coloring component iron oxides, iron blue or titanium dioxide on the natural mineral mica.

The Microna® Matte Colors were especially developed to combine good application with high color quality. The advantages of these pigments are:

- easy to disperse in the application medium;
- quick and reproducible development of the desired color shade;
- high color purity;
- worldwide approval for cosmetic use;
- soft skin feeling;
- good skin adhesion;
- natural looking shades;
- very little product color change on application to the skin.

Recommended Applications

The Microna® Matte Colors are recommended to use in all cosmetic products where a long-lasting effect is desired including all types of:

- Make up;
- Loose and pressed powder;
- Blusher;
- Anhydrous system (eg. Lipsticks).
